

USGS Scientist Dan Hanes to Highlight Brotherhood's Brunch on Feb. 28

Brotherhood's bagel brunch meeting begins at 10:00 a.m., Sunday, February 28 at TBE, followed at 11:00 a.m. by a presentation from Dr. Dan Hanes of the United States Geological Survey. The event is open to all TBE members, especially adults and budding young environmental scientists.

Dan Hanes, formerly a Professor of Coastal and Civil Engineering at The University of Florida, is now Research Oceanographer with the USGS studying coastal dynamics and sediment transport. As beautiful as we all find the ocean waves along our central coast, there's even more going on beneath the waves. Dan will talk about his recent research on coastal dynamics near the Golden Gate, with emphasis on the ebb tidal delta ("San Francisco Bar") and a large field of underwater sand waves just outside the Golden Gate. The talk will have some cool science and also lots of graphics and content of interest to non-scientists as well. Curiosity questions and wonder all welcome. Living in Santa Cruz and learning about the ocean -- what could be better? Please join us for this special event!
